

C1
addressee identification information stored in the computer-side storage means in case of facsimile transmission so that a desired piece of addressee identification information is selected, and instruction means provided in the facsimile machine so as to be instructed at a facsimile machine side to refer via the computer-side referring means to the data of addressee identification information stored in the computer-side storage means in case of facsimile transmission.

IN THE CLAIMS:

Please cancel claims 4 and 6 without prejudice to or disclaimer of the subject matter contained therein.

Please replace claims 1, 14 and 18-20 as follows:

500
D1
C2
1. (Twice Amended) A facsimile system comprising:
a facsimile machine reading image data from an original;
a computer transmitting to and receiving from the facsimile machine data of addressee identification information indicative of at least a name of addressee and a facsimile number corresponding to the name of addressee;
computer-side storage means provided at a computer side for storing the data of addressee identification information;
computer-side referring means provided at the computer side for displaying the addressee identification information fetched out of the computer as well as the data of addressee identification information stored in the computer-side storage means in case of facsimile transmission so that a desired piece of addressee identification information is selected; and
instruction means provided in the facsimile machine so as to be instructed at a facsimile machine side to refer via the computer-side referring means to the data of addressee

Cg identification information stored in the computer-side storage means in case of facsimile transmission.

5217 14. (Three Times Amended) An internet facsimile machine capable of executing facsimile transmission via an internet to an addressee using a computer installed with an application program for execution of internet facsimile transmission, comprising:

analyzing means for analyzing a data structure of data of address information registered on the basis of an electronic mail application program which is already in operation;

reading means for reading the data of address information analyzed by the analyzing means; and

format converting means for converting the read data of address information into address information with a format used on the application program for execution of internet facsimile transmission, wherein the application program for execution of internet facsimile transmission and the electronic mail application program are independently operating application programs using the computer.

C4 5217 18. (Twice Amended) A facsimile system comprising:
a facsimile machine reading image data from an original;
a computer transmitting to and receiving from the facsimile machine data of addressee identification information indicative of at least a name of addressee and a facsimile number corresponding to the name of addressee;

a computer-side storage circuit provided at a computer side for storing the data of addressee identification information;

a computer-side referring circuit provided at the computer side for displaying the addressee identification information fetched out of the computer as well as the data of addressee identification information stored in the computer-side storage circuit in case of

c4
facsimile transmission so that a desired piece of addressee identification information is selected; and

an instruction circuit provided in the facsimile machine so as to be instructed at a facsimile machine side to refer via the computer-side referring circuit to the data of addressee identification information stored in the computer-side storage circuit in case of facsimile transmission.

c5 537 19. (Twice Amended) An internet facsimile machine capable of executing facsimile transmission via an internet to an addressee using a computer installed with an application program for execution of internet facsimile transmission, comprising:

an analyzing circuit for analyzing a data structure of data of address information registered on the basis of an electronic mail application program which is already in operation;

a reading circuit for reading the data of address information analyzed by the analyzing circuit; and

a format converting circuit for converting the read data of address information into address information with a format used on the application program for execution of internet facsimile transmission, wherein the application program for execution of internet facsimile transmission and the electronic mail application program are independently operating application programs using the computer.

20. (Three Times Amended) A recording medium for recording a program for operating a facsimile machine using a computer installed with an application program for execution of internet facsimile transmission, the program realizing the functions of:

analyzing means for analyzing a data structure of data of address information registered on the basis of an electronic mail application program which is already in operation;
